Dear Friends, Oct./Nov. 2015

First off, we want to thank you, our clients, for your business and for sharing our newsletters with your friends and families. We also want to congratulate those of you who have been ordering and stocking up on Silver while it is so undervalued in spite of the longer waits for delivery. Some of you patiently waited 4 to 6 weeks, but the wait was worth it! You received your orders of silver and at below production cost!

We have been getting calls from some of our readers who have been watching the spot prices drop, hoping to buy silver at even lower prices only to learn that the physical silver purchased just a few weeks ago at higher spot prices was actually was available at lower premiums than it is now when the spot prices are lower!

We are witnessing a big disconnect right now between the spot prices and the physical. Normally, you can look at spot prices as a kind of metals barometer when you see the spot prices go up you can expect to pay more for your coins and when the spot prices fall you can expect to pay about that much less. Not necessarily so with recent low silver spots.

This can be very confusing to most folks. What most newbies don't realize is that it costs between $23-$25 per oz. just to get silver from the mines to the refineries and to the mints and produce a piece of silver you can hold in your hand. . As the spot prices (futures market) fell to insanely low prices many mines just shut down, as they were not able to keep running or produce at those prices. This caused the mints to raise their premiums. An example is the U.S. Silver Eagle. It normally sells at approximately forty five cents higher than Silver Maple Leafs or Silver Austrian Philharmonics. As of the writing of this letter, we have seen the premiums rise on all silver and United States Silver Eagles run to more than $2 more per oz. over the fore mentioned coins!

Some people are holding out for even lower spots.. Spot could still drop. It won't matter much if you can't get the actual silver anymore! Paper and stocks can go to zero. However; the physical precious metals will always be sought after and have value.

Just as there is no tool other than QE to feign financial solvency, there is no tool to balance the balance sheet of the offending entities other than Gold. It is just that simple." --Jim Sinclair

In the month of September, we watched and waited to see if the Fed would raise interest rates. It didn't happen.

The Deutsche Bank is rumored to be on the verge of collapse. If this happens, look out! This will expedite a plague in the entire banking system like we have never seen. These bank failures will drive up the Precious metals in a huge way. The three major banks which are fighting continuously to stay solvent are Deutsche Bank in Germany, Citi Group in new York and Barclays in London. These are the troubled big banks but like dominoes many other banks are lined up to follow and also topple over.

Excerpts from 9/27/2015 **Jim Sinclair's MineSet**~ Outright financial collapse, chaos and most probably war is not only in sight, it is imminent and unavoidable now. Normally I try to write and support my conclusions with current or past events via links to news. For this writing, because of the length and scope I don't plan to do this. It will be assumed that you as the reader have already heard of or read evidence of what is put forth as connectable dots.

Deutsche Bank is not "all of a sudden", they have been a derivatives monster for years and were saved in 2008 with part of the $16 trillion the Fed generously sprayed all over the world. The title suggesting DB will be the equivalent of five Lehmans is on the right track but not nearly severe enough. They are tied with JP Morgan as THE largest holder of derivatives in the world. Should Deutsche Bank fail, EVERYTHING FINANCIAL FAILS! It can even be said, "the entire world is Lehman" just waiting for their credit line to be cut 48 hours before complete failure.

What we are looking at now it "the FINAL FLUSH" of the Western financial system. The Federal Reserve has lost all credibility. This has followed both the Bank of Japan and European Central Bank being seen as hopelessly neutered of the ability to support the system. Confidence was THE very last "hope" and the Fed gave even that away last week. Of course the mainstream media chimed in on Friday saying the "market was up in the hopes of a rate hike in December". Really? Are we to believe a tightening of credit is a good thing for a system buried in leverage and being dogged with liquidity drying up? This is like saying a flame thrower is the best tool for the California fires?

Money Velocity has crashed and so has global trade. Leveraged commodity trades have blown up and left many sectors dysfunctional. Has anyone stopped to think who (other than the sectors themselves) stands to lose with $45 oil? Maybe the lenders? Would this not tighten credit even further? Why do a dozen "advanced" economies already have stock markets in bear (minus 20%+) market territory?

Geopolitically we have watched as West has lined up against East militarily in many spots all over the world. The short list includes the South China Sea, Ukraine, Yemen and of course Syria. Russia began the buildup militarily several weeks back along the Ukraine border and more recently inside Syria. Now China is reportedly sending hardware to Syria including http://www.debka.com/article/24909/A-Chinese-aircraft-carrier-docks-at-Tartus-to-support-Russian-Iranian-military-buildup ships. These are not bluffs as active fighting already exists. Can the U.S. actually "win" in any of these arenas in conventional war? It's OK, you know the answer in your own mind, you also know what the alternative to losing conventionally is.

Before going any further I must ask you this question. Does the rule of law exist in the United States anymore? How many bankers went to jail over the blatant fraud in banking, real estate/mortgages? How many brokers went to jail for stacking MBS securities with guaranteed defaults while betting against the pools? How many exposed frauds within the Obama administration have gone un punished or even investigated? Do we really have three branches of government? Congress (Republicans) has done NOTHING they said they would when the public kicked out the snakes last November...only replaced by new ones apparently. The presidency has purged the armed forces of any conservative leadership and placed "czars" at the top of new and old agencies, what's up with this?... which leaves the Supreme Court. They now effectively "write law" as they "interpret" ALL law. The Supremes will never see a duck as a duck and will write interpretations declaring the Sun full in the sky at midnight ...final ruling and no appeal! "We the People" are screwed!

Speaking of "We the People", while QE was used to mesmerize the middle class by holding the markets up, it in fact has gutted our real economy and has destroyed any possibility of making money the old fashioned way ...by working! We now have one half or more of our population "taking" benefits and the other half "giving" them, any hope of a recovery led by the middle class is now gone as is the middle class.

Is it any wonder there are now shortages and tightness in the gold and silver markets? The East believes gold "IS" money, they also know the dollar is untenable and will not be a store of value. In fact, I believe China and Russia may step in to "help" the dollar fail. I still believe Mr. Putin will come forth with a "truth bomb", I would love to be a fly (although hidden bugs will probably be everywhere) on the wall at tomorrow's meeting between Presidents Xi and Obama. I can just imagine how the conversation might go, I cannot believe the U.S. will be barking ANY orders in any fashion. A sad statement but you must ask yourself this, does the U.S. have the power or ability to make demands? Remember, we are the debtor while they are the creditor!

In my opinion we are already well within the jaws of a meltdown/shutdown as liquidity is evaporating. There are a dozen developed countries with their stock markets already in bear markets (down 20% or more). All crashes come from oversold levels just as bank runs come on fast and are a surprise at the time. What is coming should be NO SURPRISE to anyone as we are looking at the end of not only an empire but of a flawed system which has endured for far too many years! This was a solvency problem in 2008 and "liquidity" was the incorrect tool used then. Now it is a bigger solvency problem with an illiquidity kicker attached ...while the Fed has already used every tool imaginable and every last ounce of credibility. The loss of confidence in the issuer of the world's reserve currency would be bad enough in an unlevered world, the loss of confidence in today's "debt world" will be a DISASTER!

To wrap this up, do not let anything that may happen from here surprise you. The conditions are ripe for global currency crises and a shutdown of credit. The conditions are also ripe for hot war to explode in multiple venues. A meltdown or shutdown of markets will serve as a FINAL FLUSH of what remains left of the U.S. middle class. Without the "wealth" in stocks and homes, psychology will be toast. The U.S. is creating "income" from actual work at a third world level which is exactly where we are headed as our standard of living is "borrowed rather than owned". My point is this, a market meltdown and credit shutdown will make the U.S. look like 1985 Bombay within weeks as we create nothing and have saved in "nothings" and owe everyone. This is the rosy scenario and assumes that martial law is not instituted (a poor assumption in my opinion!). Standing watch with tears in my eyes,

Bill Holter Holter-Sinclair bholter@hotmail.com

The Resumption of Silver and Gold's Secular Bull Run, October 2015 - ___? is Underway

On Friday October 2, 2015, silver and gold gave indications of putting in what may in retrospect turn out to be the cyclical bear market low from the May 2011, four years plus decline. The turnaround was sharp and accompanied on high volume, with prices closing the week not far from the day's highs. Silver put in a convincing "key reversal" day. When prices move above and below, and then close above the previous day/week's range - a key reversal is said to have been formed. These do not always turn out to be valid, but if it holds, and if it takes place near the end of a lengthy decline (or in the case of a bull run, a long uninterrupted rise) then its validity is enhanced. This type of market action is usually caused when, in this case, bears - who believe prices will fall, are wrong. This causes new bulls to take charge as the bears cough up the last of their short side positions on a high volume day/week. For this particular 'reversal' to be vindicated, silver should not drop below about $14.25.

Silver key reversal day, 2 October, 2015

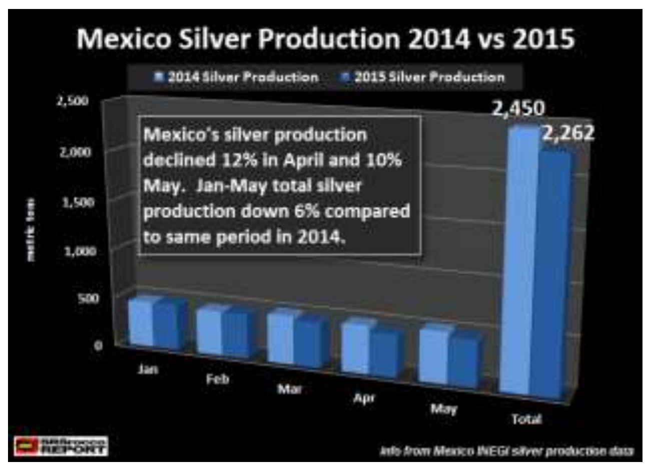
Benchmarks to watch

What chart price points on the upside for silver would provide strong evidence that a new bull run leg is now underway? Watch for a penetration (and close above) of $16.50, then $17.50 and on up into the low $20s. A successful challenge and close in the $22 area would be proof positive that "a new day" has indeed dawned, supportive for the continuation of silver's ongoing secular bull market - one which should continue for at least 3 years, and perhaps considerably longer. And upside penetration of the $26 level would be a major supportive event.

Since 2002, my publicly-stated upside target for silver has been at least $125 - $175 per ounce. Lest you think this is just pie in the sky, consider that last spring themorganreport.com published research on the inflation-adjusted silver price, concluding that it is now - in real dollars - below where it was in 2002. According to other supportive research, the inflation-adjusted price of silver, which hit $50 in 1980, and almost reached that nominal dollar level in 2011, would now be...in excess of $125 per ounce!

An evolving longer-term silver production slump?

Last month, Steve St. Angelo, took a look at silver production totals for the above mentioned countries and noticed that Australia was down 31% compared to Q1 2014, and Mexico declined enough during April-May to take its January-May production down 6% compared to the same period last year. Although Peru's production is up slightly so far, the 14% decline in May, enabled it to barely eke out a 3% rise for its January-May production over last year's metric. A few months of production decline does not a secular trend make, but when three of the largest primary silver-producing countries are demonstrating the same thing, it should cause us to start keeping a closer eye on supply side issues.



Now add massive demand from India - projected this year to equal fully 40% of the world's newly-mined silver, the stop-go/stop-again availability of American Silver Eagles and Canadian Silver Maples, not to mention sharply rising premiums for junk silver and bullion rounds. Even in the face of soft industrial use, investor buying is threatening to place a warp in the supply-demand plates that might not easily be restored without the natural rationing process of considerably higher prices.

Across the board silver premium increases (except for lesser-known coins) in all forms of bullion - soon possibly affecting premiums on the 70 pound - 1,000 ounce industrial - strength bars, could be just another passing fancy, in at most a couple of months. After all, this sort of thing has happened before. But what if this time it *is* different?

Looking at the chart premium for US 90% silver coins, a few things come sharply into view. We are interested in the times when there was a premium instead of a discount to melt value. There were pronounced spikes in early 1999 and late 2008, along with some "spikelets" in 2002 and 2003. Something similar looked like it was going to happen in 2013, but instead of a compressed advantage over spot below 10%, the premium built an intriguing strong sideways base with an upward bias, eventually rising to 40%.

For as long as this writer can remember, David Morgan, has told subscribers and audiences at speaking engagements worldwide, that investors might almost literally have to buy the last ounce of available physical silver, before the paper pyramid bucket shops that have steadily fleeced investors for a generation finally implode once and for all. If so, the COMEX would be forced into cash and carry rather than silver exchange; price discovery might permanently move to Asian physical-backed exchanges, and a run on available silver could turn the demand wave into a tsunami.

Responding to a recent heated exchange among silver supply deficit deniers about the safety of precious metal "pool accounts", Jim Sinclair remarked, ***If silver is "in your hand", you then know for a FACT you own it, no questions. If you have a "receipt" for silver, how do you know the silver is actually there?...***

The reason people own gold or silver is to protect themselves from a financial collapse. Factually, NOTHING has been changed or fixed since the 2008 affair, what comes will be very close to the same thing, only worse as debt and leverage ratios are far worse. A financial collapse is mathematically coming, this is not opinion. Gold and silver are crash insurance and will be "called" on when the markets break. They must be available in a time of crisis to perform their function. If you hold metal in hand, you have no question as to whether you own it...(if) all this paper is not in fact backed, you end up just like everyone else, broke!

What have we learned from the 2008 crash?
To really understand how perverse the corruption, systemic rot and out-of-control financial sector has become since the close-run call the global system had in 2008 - coming literally within hours of spinning our world into the greatest global depression in history, take time to read and reflect upon this report, posted 30 September, 2015 in the *Guardian* (UK) titled *How the banks ignored the lessons of the crash.* In this lengthy article, *W*riter, *Joris* Luyendijk spent two years talking to several hundred City (London) insiders. He notes uneasily that "they revealed how close we came to disaster - and how quickly finance went back to business as usual."

You will see incontrovertible evidence as to how callous, self-centered and insular the players in these financial houses of cards have become - not just in London, but the U.S. as well. The foxes are loose in the hen house, and if you don't take action to protect your finances - with a good start being making sure you have in-your-hand gold, silver and palladium insurance - then your risk when these self-identified "masters of the financial universe" take the system down could be more than you can calculate.

Lest you feel I've overstated the risk of systemic collapse ahead, and that "the government" will be able to, or even cares about protecting you - let me finish this segment with Luyendijk's concluding words (the bolds are mine):

...how is the global financial sector to be brought back under control if there is no global political authority capable of challenging it? Seven years after the collapse of Lehman Brothers, it is often said that nothing was learned from the crash. This is too optimistic. ***The big banks have surely drawn a lesson from the crash and its aftermath: that in the end there is very little they will not get away with.***

Mining stocks are supportive of stronger metals' prices

Since mid- 2011, and especially the last 18 - 24 months, the mining sector has undergone a profound transformation. Hundreds of companies large and small have gone out of business. Others have changed their focus - moving into selling marijuana, coffee or farmland. But those with the most agile management have seen the light and turned themselves into lean, mean fighting machines. I could have listed several dozen miners who are displaying positive price action, but let's just look at two. (And let me just say for our readers, first, that I own both of these companies, and second that in my considered opinion, they are two of the best run primary silver producers of which I am aware. Due to space limitations, I will list two others without their charts - which I also own - that are equally deserving of research, for those who in addition to holding physical precious metals, also trade mining stocks. These are First Majestic Silver (NYSE: AG) and Avino Silver (NYSE: ASM).

Silver Supply - new additional long-term constraints

70% of newly-mined silver comes from large base-metal (copper-lead-zinc) producers. In most cases, like Glencore - whose debt threatens to sink the company, and BHP Billiton, even the millions of silver ounces they produce annually are little more than footnotes to the bottom line. When base metals prices are low - like they are now - these producers will cut back, not only on production, but also on expansion and exploration.

It's important to understand that every mine in existence - be it gold, silver or base metals - is a wasting asset. Each extracted ounce places a mine one ounce closer to extinction. The only way it continues to operate and thrive is to either extend known deposits, find new ones, or buy discoveries from exploration companies. At the present time, the Majors are slashing production, shelving projects, closing down "green field" survey plans, and watching as small exploration companies - the lifeblood for finding new deposits - blow away like dying leaves in the autumn wind. Analogous to the Alaska Pipeline out of Prudhoe Bay, which due to petroleum reserve depletion is reportedly now running at only 25% capacity, the pressure flow of newly-produced metals into supply pipelines looks to have topped, and is on the decrease.

Additional production constraints from the Locals - some valid, others not.

In recent years, environmental "push back" has been a major factor in slowing down new production properties or stopping them altogether. Sometimes that's probably a good thing. One example that comes to mind is Alaska's Pebble project, which was to be situated between two rivers that flow into spawning lakes atop Bristol Bay. This drainage system supports the world's largest Sockeye Salmon run, with annual numbers running into the tens of millions. The mining project holds a reported 100 million ounces of gold, and billions of tons of copper. But construction and operation would involve building tailings dams hundreds of feet high and maintaining them for generations. If one gave way, or if there was an earthquake - well you get the picture. Another questionable pursuit involves harvesting ore from ocean sea beds.

But there are projects which can be operated without permanently despoiling the environment, helping provide the world's population with what is needed in order to lead productive and rich lives. David Morgan says it best "Everything we use must either be mined or grown!" The bottom line is that we *must* mine - but that we also must and can do it in the most environmentally-responsible way possible.

A lot of base metals - and silver/gold production - come from large open pit mines. Ore is dug up and transported to the surface by large trucks driving in concentric rings. Then it is either sent to a mill for processing, or stacked in large heap-leach pads where chemical solutions "leach" metal from the crushed rock. Some of the biggest open pit mines - operational or planned, are to be found in Peru, the world's third largest silver producer, and 6th in gold. Here's what's been happening there.

* Four years ago, production at Newmont's $4.8 billion Minas Conga gold mine was halted.
* Earlier this year, Southern Copper's Tia Maria project was stopped.
*Last week, work at China Minmetals' Las Bambas copper mine - in an "advanced stage of production" and expected to be the world's third largest on a copper resource basis - was brought to a standstill when four protestors died, forcing the government to send in the army and police.

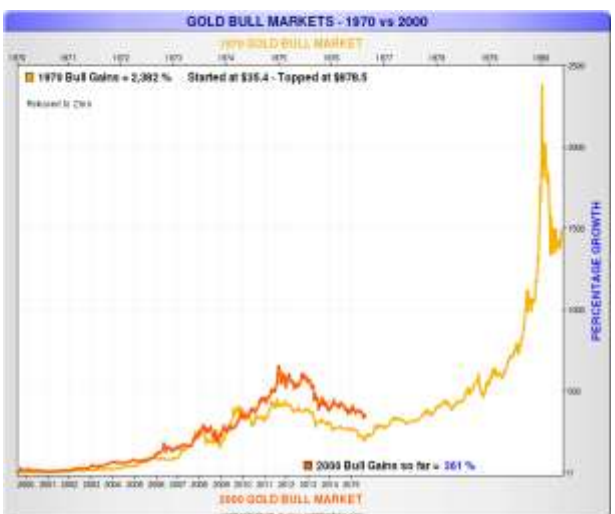
MMG's Chief Executive Officer made the following statement:

Our focus remains on ensuring the safety of the people located at the site and the local community, as well securing the site itself. As a result, late stage commissioning activities are now suspended. Clearly our preference is for those organizing these protests to stop the violence, respect the orders of the military and police and to speak with us. The Las Bambas team has maintained positive dialogue with the Cotabambas and Grau communities of Apurimac over close to ten years of project development.

Notice the time-frame involved with this project, yet to begin production. Ten years! Over the last couple of decades, major discoveries are down, grades are down, and time from discovery to production has risen...a lot.

Think Greece, think Romania, think Chile-Argentina (Pascua Lama). The trend towards more exploration and production "issues" going forward is clear. Combine this with record demand by investors for gold and silver - which if it continues at anything near the current pace, is going to make adequate supply increasingly problematic, with premiums at anything below "outrageous rates" a pipe dream.

Consider printing out this gold chart



It offers a comparison between the gold (and by inference, silver - since 90% of the time, both move in the same direction) bull market run-up to 1980, and the current secular run, which began in the 200-2002 time frame. During the first run, gold started its ascent from $35, (after becoming once again legal to own), rose to $200, lost 50% of its value, then rocketed up over 800% in about two years, topping at $875 an ounce.

During the recent run into 2011, gold rose for an amazing 11 consecutive years - all the while naysayers "trash talked" it - (how many bought any at all?) Then when gold turned into its cyclical bear move down (which has most likely been completed or soon will be) reminiscent of the downdraft of the late 1970's, negative chatter continued without respite. Quoting the late Yogi Berra, "It's difficult to make predictions; especially about the future." Yet bear-market savants just *know* gold is headed down to at least $700!

In my strongly considered opinion, absent an unlikely but always possible short-lived drop to the $1,000 area, the cyclical gold (and silver) bear has pretty much run its course. Even if the downside was $200, and the potential upside was just to the old highs - let alone a highly probable run into $3,000 - $5,000 over the next few years - the reward to risk equation would still be a minimum of 4:1. Some of the most thoughtful industry leaders in the resource sector - men like Pierre Lassonde, Rob McEwen and Jim Sinclair - have long stated their belief that gold is destined to reach at least $5,000 an ounce. When gold was trading in the mid-hundreds of dollars the ounce, Lassonde made one of the most fascinating statements ever uttered on the subject. Said he, "I believe that gold will eventually trade in four digits - I just don't know what the first number will be."

So my suggestion to you is to print out this comparative gold chart and use it as a talisman to help keep you optimistic and in the game while gold and silver make their third and largest run of the move that got underway in 2000. Almost every major bull market in history has three major drives to the top, ending in a speculative mania. As David Morgan has so famously stated - after exhaustively researching the topic to fully test his premise - "90% of the entire move in a blow-off bull market takes place during the last 10% of the time" (that the secular bull run has covered).

In previous articles, I've extensively covered elements supporting my belief that, yes indeed, "this time it will be different". A global phenomenon, with massive sovereign, state and local debt levels, the shifting of geopolitical tectonic plates, loss of faith in government, and the incredible power of the Internet to broadcast change as price discovery once again reverts from Wall Street back to the masses. Make no mistake, some day this market will definitely roll over for good. When it does, you will want to be largely out of metals - except for a small, permanent insurance position - and definitely out of the mining stocks. *But by then*, chances are excellent that it will have become one for the record books. Try not to miss it!

This is not going to be the end of the world - but it will be the end financially for many people around the globe - as one of the greatest transfers of wealth in history takes place. On which side of that transfer will you be?

END

GOLD~ CATEGORY ONE INSURANCE

These are the modern bullion coins and bars which were minted to be a store of gold wealth or purchasing power based on the value of the metal. This is in contrast to the original U.S. gold coins of 100 years ago which were traded at face value such as the old $20 St Gaudens, or $10 Indian, for instance.

American Gold Eagle coins have been minted from 1986 through the present year. They, like the Austrian Gold Philharmonic and Canadian Gold Maple Leaf and several others are available in 1oz, 1/2oz, 1/4oz and 1/10oz sizes. The lowest premiums are found in the one ounce coins and continue to grow as the coin sizes get smaller. You can purchase any of these in any quantity or combination that you like. We are seeing a fair amount of interest in clients putting away the dime sized 1/10oz Gold Eagles in 50 coin rolls totaling 5oz. This is a way to purchase these very useful small coins at quantity discounted prices before the spot prices go up much further. They could come in *very* handy in the near future. They are also **Wonderful Gifts!** Most Gold coins and bars are **IRA** acceptable too! **CALL Resource Consultants, Inc. 800-494-4149 for current prices , recommendations or to place an order. BuySilverNow.com**

GOLD~CATEGORY TWO INSURANCE WITH A KICKER

We love the old U.S. Gold coins in XF (extra fine condition). If you have a good start on the" insurance" part of your portfolio, these coins can be a great addition. Not only are they a private store of wealth, they are beautiful pieces of our history. Their premiums are just slightly higher than the modern bullion coins. We've been helping many of our clients put together date sets of these beautiful coins in $20, $10, $5 or $2.5 sizes. What a wonderful way to build a collection and these are a tremendous gift to pass on to your children!

GOLD ~CATEGORY THREE NUMISMATIC

If every there were ever an opportune time to be starting or adding to your coin collection of United States collectable coins, it is now! The numismatic coin market has been hard hit with the recent years low metals prices and interest in these coins has just starting to heat up again! These PCGS or NGC third party graded coins are wonderful to collect in common dates and build date sets. For true collectors, the excitement of owning a collection of more rare date or higher grade coins can become both profitable and very satisfying.

Call us for current recommendations and we will help you with your coin collecting goals! **800-494-4149.**

SILVER~CAREGORY ONE INSURANCE

We can't stress enough the importance of having as much of this white metal put away as you can acquire. Buy precious metals while you can and because you can!

From our past letters, you are well acquainted with the old familiar 90% pre 1965 U.S. silver coins and the 1oz Silver Eagles , Maple Leaf, and Philharmonics as well as the 1oz , and fractional sizes silver rounds. All are available in rolls or monster box sizes. Call for availabilities and pricing.

The Perth Mint , is presenting for the first time, "2016" 1oz 99.99 pure Silver Kangaroo coins! **This is the first year of mintage** and these coins are available in 500 coin Monster boxes as well as single 25 coin rolls. These pure silver coins are available now. Grab up as many as you can. All the silver is good to own , but it's nice to get in on the first year of mintage of these 99.99 coins.

Precious Metals IRA's are still going strong. Did you know that you can transfer any amount of your existing IRA into a physical precious metals IRA without tax ramifications ? **Resource Consultants, Inc. is ready and able to help you with this process of holding Physical Gold, Silver, Platinum or Palladium in your Precious Metals IRA account. Call RCI at 800-494-4149 and we will step you through the process and give you the contact information for a few of the best Trust companies to work with!** We have just added a new one to our list of recommended and are pretty sure you will find them very easy to work with!

It is well known that Precious Metals are hard money, real money. These are stores of economic energy and offer the purchasing power for goods, services and labor. Most of you know that paper money, at best = energy I.O.U.s. When currency is backed by gold for every piece of currency there is a certain quantity of gold stored to back it up. A bit of trivia: A true gold standard only existed here from 1879-1933 In actuality, The U.S. did not begin with a gold standard , but had a bi-metallic standard of Gold and Silver The ratio of Silver to Gold in a denomination was 15 to 1.

HEALTH

To the individual who believes that how you look, act and feel should not be limited by age, ASEA is for you! If you would like to learn more about ASEA and Renue28 ,place an order or find out more about joining our team, call us at 800-494-4149 and ask for Linda**. www.amazingmolecules.com** will give you some of the science and history of the product and **www.signalingstories.com** will offer some testimonies of others who have truly benefited from using ASEA and Renu28. See how you can save 20% or more and join our team!

You can follow/like Resource Consultants, Inc. on FaceBook and check for special offers on our website: <u>www.BuySilverNow.com</u> be sure to share with your friends too! 800-494-4149

Thank you for your business, your referrals, and your friendship. We appreciate being your choice in precious metals education and acquisition.

God Bless each of you,

Linda C Gorman

Linda & Pat Gorman
